What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2023). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.

Are battery energy storage systems worth the cost?

Battery Energy Storage Systems (BESS) are becoming essential in the shift towards renewable energy, providing solutions for grid stability, energy management, and power quality. However, understanding the costs associated with BESS is critical for anyone considering this technology, whether for a home, business, or utility scale.

How much does nmc111 battery cost?

NMC111 with equal shares of nickel, manganese and cobalt assumed here. Battery pack price of 130 USD/kWh assumed. Values in brackets show baseline raw material cost assumptions based on monthly average prices from 2010-2020.

Does raw material cost affect lithium-ion battery pack prices?

The analysis shows that each material only contributes a minor share to total raw material cost. In addition, total raw materials cost only constitute a share of total product price. The cost increase of one raw material will therefore only have a limited impact on lithium-ion battery pack prices.

Are O&M costs lower for lithium-ion systems?

O&M costs are typically lower for lithium-ion systems due to fewer moving parts, but they should still be factored into your long-term budget. Modern BESS solutions often include sophisticated software that helps manage energy storage, optimize usage, and extend battery life.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

But here's the kicker - while lithium-ion systems now average \$280-\$350 per kilowatt-hour (kWh) globally, upfront costs for grid-scale projects still range from \$1.2 million to \$2.1 million per MW ...

1) Total battery energy storage project costs average \$580k/MW 68% of battery project costs range between \$400k/MW and \$700k/MW. When exclusively considering two-hour sites the median of
