

Average domestic energy storage price per 20kWh in Mexico

Should electrical energy storage systems be used in long-term power auctions?

As being generally technology-agnostic, the use of Electrical Energy Storage Systems (EESS) within the long-term power auctions was neither explicitly encouraged nor discouraged. This analysis assumes that the EESS, more specifically the BESS, would be part of a solar PV plant.

Is electrical energy storage system use case a source of revenue?

An Electrical Energy Storage System use case for the capacity component only exists if a capacity component was awarded in the auctions. Therefore, no revenue can be generated from the results of the 2015 auctions due to a lack of awarded capacity bids. However, capacity is a possible source of revenue from the 2016 and 2017 auctions.

How much does a power plant cost per MW?

This value is in line with typical market conditions worldwide, where the contracted operation of such services is typically between 150,000 USD and 400,000 USD (3 to 8 million MXN) per MW and year.

Why do we need energy storage?

The current main driver for the need for energy storage is the fact that renewable energies in general, and particularly photovoltaic and wind power plants (variable Renewable Energies - vRE), are increasingly entering the electricity market whilst displacing conventional technologies.

How much power does a battery energy storage system use?

A typical Battery Energy Storage Systems in standby only consumes between 0.5 - 2% of its nominal power (e.g., a BESS with a nominal power of 1 MW would have an average auxiliary power consumption of 5 kW - 20 kW) and can be started from the "cold" offline state to the "hot" running state within 5 seconds or less.

Can a capacity component be used for electrical energy storage system?

These bids included PV plants, wind power plants and geothermal generators. An Electrical Energy Storage System use case for the capacity component only exists if a capacity component was awarded in the auctions. Therefore, no revenue can be generated from the results of the 2015 auctions due to a lack of awarded capacity bids.

Hydrocarbon storage has been on energy executives' minds for a long time. Issues with capacity, safety, pricing and security are not new, but the dramatic drop in demand has brought them on the forefront.
