How does Swissgrid distribute costs?

The distribution of costs by Swissgrid takes place according to usage. Where this is not possible, the costs are passed on to the distribution system operators and the end consumers at the respective grid level on the basis of meter data for services and energy and corresponding tariffs and billing rates.

How does Swissgrid calculate grid usage & system service tariffs?

Every year Swissgrid calculates the grid usage and system service tariffs for its services - the operation, maintenance and expansion of the transmission grid. The distribution of costs by Swissgrid takes place according to usage.

How much does Swissgrid cost in 2024?

A Swiss household like the one described will therefore pay about 92 Swiss francs in 2024. The costs for the power reserve amount to 54 Swiss francs. Swissgrid charges its tariffs, which are standardised throughout Switzerland, to the distribution system operators and end consumers directly connected to the transmission system.

How much does a grid connection cost?

The complexity of grid connection requirements varies significantly based on location and local regulations, with costs ranging from EUR50,000 to EUR200,000 per MW of capacity. System integration expenses cover the sophisticated control systems, energy management software, and monitoring equipment essential for optimal battery performance.
