Why did NCM battery cell prices drop in May?

Asian nickel cobalt manganese (NCM) battery cell prices fell to their lowest level for the first time in over three years in May, retreating significantly from the peak seen in 2022. A combination of lower critical battery raw material prices, supply glut, a sluggish demand and improving technology has kept a tight lid on NCM [...]

How much does cobalt cost in 2022?

For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024. Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024.

What is the market share of NCM batteries in 2021?

In 2021, NCM batteries commanded 58% of the market share, closely followed by LFP and NCA, each holding a 21% share. Looking ahead to 2026, the article predicts significant shifts in market dynamics. LFP batteries are projected to nearly double their market share, reaching 38%.

Is cobalt a byproduct of nickel production in Indonesia?

Cobalt is a byproduct of nickel production in Indonesia. Shortages of nickel have fuelled a rally that took prices to \$24,435 a tonne last month, the highest since August 2011. DOES LITHIUM ALSO HAVE ESG ISSUES? Lithium mining also faces opposition from environmental and social activists.

Are NCM batteries a good choice for EVs?

This cost advantage makes them a favorable choice for standard- or short-range EVs. In the rapidly evolving EV battery market, specific compositions have taken center stage. In 2021, NCM batteries commanded 58% of the market share, closely followed by LFP and NCA, each holding a 21% share.

Why do we cut cobalt in EV batteries?

WHY CUT COBALT? One reason to cut cobalt content in EV batteries is cost- cobalt metal on the London Metal Exchange is trading at four-year highs around \$71,000 a tonne. Also, 50% of the world's cobalt reserves are in Democratic Republic of Congo where potential for political instability and disruption is high.
