How much does nmc111 battery cost?

NMC111 with equal shares of nickel, manganese and cobalt assumed here. Battery pack price of 130 USD/kWh assumed. Values in brackets show baseline raw material cost assumptions based on monthly average prices from 2010-2020.

How much does cobalt cost in 2022?

For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024. Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024.

Why are nickel-metal hydride batteries expensive?

Nickel-metal hydride batteries exhibit relatively high raw material cost due to large amounts of nickel. These batteries are also subject to commodity price fluctuations of nickel, leading to pack cost of 250 USD/kWh in the worst case.

What is the difference between lithium ion battery prices and nickel prices?

Data until March 2023. Lithium-ion battery prices (including the pack and cell) represent the global volume-weighted average across all sectors. Nickel prices are based on the London Metal Exchange, used here as a proxy for global pricing, although most nickel trade takes place through direct contracts between producers and consumers.

How much does a ncm811 battery cost?

Even in Greater China, the cost of an NCM811 battery pack is about \$103/kWh. The price of battery metals will likely increase in the longer term; however, due to economy of scale and efficiency gains, the cost of manufacturing will be lowered.

Are lithium and cobalt prices market-reflective?

This includes benchmark prices for lithium and cobalt, two battery materials that continue to experience market volatility and supply/demand imbalances. Our widely used prices are market-reflective, assessing both the buy- and sell-side of transactions.
