

Average utility scale ESS price per 1MW in Canada

What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2023). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.

How much does a 1 MW battery storage system cost?

Given the range of factors that influence the cost of a 1 MW battery storage system, it's difficult to provide a specific price. However, industry estimates suggest that the cost of a 1 MW lithium-ion battery storage system can range from \$300 to \$600 per kWh, depending on the factors mentioned above.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

What is utility-scale battery storage?

Utility or Grid-Scale Battery Storage is essentially what it sounds like: the use of industrial power batteries to store energy that can be accessed when needed. Picture the battery that's in your cellphone.

Why did Modo Energy Survey the battery community?

Because of this, Modo Energy surveyed the battery community - to produce this battery cost benchmark. If you finance, own, or develop battery energy storage systems, you can use this data to support procurement and sense-check financial models. To produce this benchmark, Modo Energy surveyed various market participants in Great Britain.

How does utility-scale storage work?

Utility-scale storage is optimised by charging during off-peak hours (when the grid is powered primarily by nuclear and hydro in Ontario and therefore low-emitting) and injecting energy back into the grid during peak hours.

In 2025, you're looking at an average cost of about \$152 per kilowatt-hour (kWh) for lithium-ion battery packs, which represents a 7% increase since 2021. Energy storage systems (ESS) for four-hour durations exceed \$300/kWh, marking the ...
