What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2023). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

What is a utility-scale energy storage project?

It concerns the products and services for the various use cases of energy storage, including development, construction, operation and maintenance. Utility-scale projects tend to be project financed, which implies that the energy storage system (or the larger project of which it is a part) is owned by a project company (or special purpose vehicle).

Can a small-scale Li-ion system cost less than a diesel-only system?

However, if the cost "add-ons" that make a small-scale Li-ion system so much costlier can be reduced to near utility-scale Li-ion BESS prices, for the clientele of cases B-1 to 4, the cost of electricity can drop to equal or lower figures as that of diesel-only configurations.

What is levelised cost of electricity (LCOE)?

Levelised cost of electricity (LCOE) The Levelised Cost of Electricity is the average cost per kWh of energy produced, taking all costs and the time value of money into consideration for the entire project lifetime.

Is a 4H system cheaper than a utility-scale system?

However, the cost for a small scale 4h system in 2035 is forecasted to be roughly 27% lower than in 2021 whereas the cost of a 4h utility-scale system is forecasted to be about 46% lower. The gap between the cost experienced by small Li-ion systems vs utility -scale system is forecasted to grow wider.
