

Commercial energy storage cost vs benefit calculation in Australia

How is energy stored in Australia?

Currently storage of electrical energy in Australia consists of a small number of pumped hydroelectric facilities and grid-scale batteries, and a diversity of battery storage systems at small scale, used mainly for backup. To balance energy use across the Australian economy, heat and fuel (chemical energy) storage are also required.

Is commercial investment possible in energy storage assets?

In the absence of both of these, commercial investment becomes unfeasible. In the context of utility scale energy storage (energy storage) assets, the current electricity market and regulatory framework does not support cash flows of this nature.

What are the costs and benefits of ESS projects?

Costs and benefits of ESS projects are analyzed for different types of ownerships. We summarize market policies for ESS participating in different wholesale markets. Energy storage systems (ESS) are increasingly deployed in both transmission and distribution grids for various benefits, especially for improving renewable energy penetration.

Do energy storage projects rely on government subsidies?

number of global and Australian storage projects have relied on government subsidies (eg. Hornsdale Power Reserve), which is not surprising given the nascent state of the energy storage market. This paper refers only to utility scale energy storage systems.

Will energy storage transform Australia's energy generation mix?

Following the recent unprecedented renewable energy boom, 2019 is set to focus on how renewables can transform Australia's energy generation mix. This is not being driven by ideology, but by economics. Energy storage will play an important role in this transformation.

When are energy storage prices high?

Historically, the highest prices have been in the weekday 'shoulder' periods between approximately 7am-8am and 6pm-9pm. This is typically when demand is high. Despite this pattern, demand and supply in the National Energy Market (NEM) Energy storage projects are able to engage in time-of-day trading strategies; buying low and selling high.
