How many Bess projects are there in Chile?

This momentum is reflected in the data: AMI estimates that there is a 7.7 GW pipeline of BESS projects in Chile, far and away the most advanced front of the meter (FTM) storage market in Latin America. Only 505 MW of BESS projects are currently operational in the entire region.

Are battery energy storage systems a viable alternative for Chilean power producers?

With transmission lines at overcapacity and permitting delays slowing the development of new grid infrastructure, battery energy storage systems (BESS) have surged as a profitable alternative for Chilean power producers.

How much storage capacity does a Bess container have?

Driven by bigger cells sizes and other technology advances, the industry is also increasingly seeing 20-foot BESS containers with 5MWh storage capacity from system integrators and vertically integrated battery manufacturers. Some are even exceeding that capacity, such as CATL with its 6.25MWh Tener solution.

Why are project finance transactions increasing in Chile?

Fitch Ratings-Sao Paulo/New York-01 April 2025: Project finance transactions in Chile are expected to increase due to the recent commissioning of large battery energy storage systems (BESS), Fitch Ratings says. This should balance electricity supply and demand while reducing price volatility for renewable energy generators.

How much does Bess cost?

The cost of BESS has fallen significantly over the past decade, with more precipitous drops in recent years: This is nearly a 70% reduction in three years, owing to falling battery pack prices (now as low as \$60-70/kWh in China), increased deployment, and improved efficiency.

How much does a Bess DC block cost?

Similarly, BNEF found in its annual survey that BESS DC blocks in 4MWh or larger enclosures came in 27% cheaper on average than those in the 2MWh to 4MWh range, at US\$128/kWh versus US\$176/kWh. The firm's survey found that the price differential is expected to continue into 2025.
