

What incentives are there for onsite generation in the Czech Republic?

At the same time, stakeholder and regulatory pressure encouraged Czech organisations to invest in renewable power. There are several EU incentives to spur the growth of onsite generation. For example, the Modernisation Fund supports investments in energy efficiency, storage, network upgrades and the re-skilling of workers.

Why are Czech businesses investing in renewable projects without subsidies?

The subsidy increases to cover up to 75% of costs for community projects. But what we noticed at Wattstor is that Czech businesses are investing in renewable projects even in the absence of subsidies, because they have realised the strong business case for generating clean energy on site.

How has the energy crisis impacted the Czech Republic?

With coal dominating the energy mix, the Czech Republic has traditionally enjoyed low electricity prices and a steady supply of domestic fuel. However, the recent energy crisis, together with pressure from stakeholders and regulatory bodies to decarbonise, has triggered an unprecedented shift in the country's energy market.

Will a battery storage system help Czech companies achieve net zero?

The high penetration of renewable generation projects in the region could deliver a large amount of clean energy and really accelerate the journey to net zero, but at the moment Czech companies are not in a position to reap the full benefits of solar and other renewable energy sources. To do so, battery storage will be essential.

Is there a potential for solar installations in Europe?

There is a huge potential for solar installations, with ideal climate conditions and substantial funding coming from the EU. The situation is similar in other areas of Central and Eastern Europe, where Wattstor has already completed a number of successful renewable energy installations - such as Poland, Croatia and Slovakia.

Natural gas is the fourth-largest energy source in the Czech Republic. Industry is the largest user, followed by residential and electricity and heat generation. With hardly any domestic gas production, the Czech Republic ...

Executive Summary The document "National Action Plan for the Development of the Nuclear Energy Sector in the Czech Republic" (NAP NE) follows the updated State Energy Policy ...

The US Department of Energy's "Energy Storage Project Database", lists just five operational energy storage projects online in the Czech Republic so far. Four of these are pumped hydro ...

While financing the storage of electricity has often been carried out on a low-leveraged, corporate or portfolio

basis, as the size of battery projects increases, we are now ...

Energy storage is a crucial technology to provide the necessary flexibility, stability, and reliability for the energy system of the future. System flexibility is particularly needed in the EU's ...

The Energy Storage Association (ESA) has an energy storage vision "'of 100 GW by 2030'" and that goal is right on schedule, even with the economic downturn and global pandemic. The growth is primarily comprised of large grid-connected ...

Introduction Clean Power 2030 and smart meters In December 2024, the UK government published its "Clean Power 2030 Action Plan" [footnote 1], outlining a pathway to a ...

Every five years ... in conjunction with the Secretary [of Energy] ... develop a five-year plan for integrating basic and applied research so that the United States retains a globally competitive ...

The Amendment Act provides that the Energy Transformation Fund will finance investments aimed at modernization, diversification or sustainable transformation of the energy sector, in ...

The European Commission (EC) has approved the Czech Republic's plan for a EUR-279-million (USD 303.7m) state aid programme that will enable the deployment of at least ...

The expansion of Moss Landing Energy Storage Facility in California, already the world's biggest BESS project, to more than 3GWh was one of the highlights of the first half ...

This event will bring together key stakeholders from across the region to explore the latest trends in energy storage, with a focus on the increasing integration of energy storage into regional grids, evolving ...

Foreword As part of the U.S. Department of Energy's (DOE's) Energy Storage Grand Challenge (ESGC), DOE intends to synthesize and disseminate best-available energy storage data, ...

The rapid growth in the energy storage market is similarly driving demand for project financing. The general principles of project finance that apply to the financing of solar and wind projects ...

Coal-free Czechia 2030 As well as coming with higher costs and financial risk, a coal phase-out focused on gas would expose Czech energy security to volatile international markets, due to a ...

By enabling greater shares of renewables in the power system and shifting electricity supply to when it's most needed, batteries will help advance progress on the goals set at COP28. These ...
