

Hybrid solar storage cost vs benefit calculation in Tanzania

Are private-owned mini-grid systems financially feasible in Tanzania?

Our analysis shows that despite a well-structured mini-grid tariff system and subsidies initiatives in Tanzania, operating privately-owned mini-grid systems in rural communities is not financially feasible. Further, we describe some of the challenges with the effective deployment of mini-grid systems in Tanzania.

Are mini-grid electrification projects profitable in Tanzania?

Additionally, using an optimization technique, we assess the profitability of a mini-grid electrification project in Tanzania from a private investment perspective. We find that the approved standardized small power producers' tariffs and subsidy scheme in Tanzania still do not allow mini-grid for rural electrification projects to be profitable.

Are subsidies enough for mini-grid projects in Tanzania?

However, most of the subsidies for mini-grid projects in Tanzania were implemented between 2008 and 2014 (Org et al., 2016). Even if we apply the subsidies that used to be in place (Marching Grant and Performance Grant), they will not be enough to make the project profitable.

What is a hybrid energy system?

The Hybrid System emerges as the most cost-effective solution with approximately 89% penetration of renewable energy generation (PV+Battery) throughout the year. Its optimal system configuration is expected to generate 16.75 MW of electricity per day, approximately 22% more than the estimated load demand of 12.55 MW per day.

Where can I get a loan for a mini-grid project in Tanzania?

The loan facility is accessible through the Tanzania Investment Bank with 15 years payback period. Additionally, the World Bank has also made available \$75 million under the Renewable Energy Rural Electrification Program to support the development of mini-grid projects between 2015 and 2019 (Org et al. 2016).

Who rents solar hybrid mini-grid systems?

With both on-grid and off-grid projects throughout West and East Africa, German company Redavi rents solar hybrid mini-grid systems to household and commercial and industrial (C&I) customers. After a certain period and depending on the structure of the rental contract, customers have the option to own the system.
