LFP battery system tender price in Serbia 2026

Could Serbia be a technological leader in LFP battery production?
The Republic of Serbia could be a technological leader in LFP battery productionin the whole world outside of China,because it has a chance to become the first in Europe to mass-produce this type of battery. The signed Memorandum with the European Union envisages a serious focus on the ecosystem of electric vehicles and battery production.

How much will a battery cost in 2026/27?
That trend is expected to continue. In 2026/27,the average pack price is expected to fall below $100/kWh,based on raw material costs,competition,and pressure from alternative technology such as Na-ion batteries,which could be 30% cheaper than LFP devices when production of the former is scaled up.

Where does LFP spot price come from?
LFP spot price comes from the ICC Battery price database,where spot price is based on reported quotes from companies,battery cell prices could be even lower if batteries are purchased in high volume. Estimated cell manufacturing cost uses the BNEF BattMan Cost Model,adjusting LFP cathode prices with ICC cathode spot prices.

Do LFP batteries contain cobalt?
They do not contain cobalt,nickel,and other hard-to-obtain materials. ElevenEs,an industrial spin-off of the multinational Al Pack Group,which specializes in aluminum processing and has been operating on the packaging market for 25 years,has developed its own technology to produce LFP batteries that are more sustainable and efficient.

Why are LFP batteries so popular?
LFP batteries have been around for some 20 years in science,but engineering innovations have allowed them to be used in almost all applications today. They have primacy in the world industry because they last three times longer,are 10% cheaper and are safer than other types of batteries,for example than NMC (nickel-manganese-cobalt) batteries.

Are nickel-based batteries better than LFP batteries?
Although nickel-based batteries outperform LFP on energy densityand are likely to remain the best option for performance cars,LFP is far better in terms of cost,safety and lifetime,making it a perfect choice for industrial,ESS and city EV (shorter range) applications," says Jakub Miler,CEO at EIT InnoEnergy Central Europe.

In 2026/27, the average pack price is expected to fall below $100/kWh, based on raw material costs, competition, and pressure from alternative technology such as Na-ion batteries, which could be 30% cheaper

LFP battery system tender price in Serbia 2026

...

Subotica, Serbia The production site, located in Subotica, Serbia, specializes in producing high-quality LFP prismatic cells which are shipped to customers for sample A and B testing across a variety of ...

It said 60 of the bids were below $68.4/kWh. The tender is for the supply of energy storage systems - specifically lithium iron phosphate (LFP) battery cells - that will be built in 2025-2026.

The landscape of electric vehicles in 2026 will be shaped by a remarkable convergence of advanced battery technologies, driving gains in performance, sustainability, and affordability.

According to a recent analysis, the average price of lithium-ion battery packs for electric vehicles fell by 20 per cent to USD 115 per kilowatt hour in 2024 - the sharpest price drop since 2017. The USD 100/kWh mark could ...

A render of ElevenEs" gigafactory complex in Subotica, Serbia. Image: ElevenEs. Some of the current market prices for lithium-ion batteries are below cost and will not last forever but Europe still needs to be more cost ...

The tender specifies that lithium iron phosphate (LFP) battery cells with a nominal capacity of more than 280Ah must be used, achieving an overall system efficiency of more than 85%.

According to a recent report released by Goldman Sachs, the global average battery price has dropped from $153/kWh in 2022 to $149/kWh in 2023. Goldman Sachs predicts that by the end ...

That trend is expected to continue. In 2026/27, the average pack price is expected to fall below $100/kWh, based on raw material costs, competition, and pressure from alternative technology such as Na-ion ...

A gigawatt-scale factory producing lithium iron phosphate (LFP) batteries for the transport and stationary energy storage sectors could be built in Serbia, the first of its kind in Europe.

The Republic of Serbia could be a technological leader in LFP battery production in the whole world outside of China, because it has a chance to become the first in Europe to mass-produce this type of battery.

The production site, located in Subotica, Serbia, specializes in producing high-quality LFP prismatic cells which are shipped to customers for sample A and B testing across a variety of applications, including electric cars, ...

Battery storage startup ElevenEs said its manufacturing facility in Serbia is fully operational. It is the first lithium iron phosphate (LFP) battery cell factory in Europe, it added. In Serbia"s northernmost city of Subotica, a project ...

LFP battery system tender price in Serbia 2026

This drop is due to innovations that improve energy density and reduce costs, as well as a decline in lithium and cobalt prices, which comprise about 60% of battery costs. Two major battery types dominate the ...

VW"s unified EV cell format brings cell-to-pack battery design Cuts costs, sets stage for cell-to-body and simplified EVs Means EVs with more range and energy density, perhaps lower weight LFP ...

The Serbian company ElevenEs has opened a plant for the production of battery cells. It is located in Subotica, Serbia, and specialises in the production of prismatic LFP cells. By 2024, the plant is to be expanded into a ...
