

Large scale battery storage cost vs benefit calculation in Spain

Can battery storage systems be retrofitted in Spain?

The first solution is battery storage systems that enable peak shift, i.e. feeding electricity into the grid at times when the wholesale price is higher, usually before and after sunset. Fortunately, the retrofitting of battery storage systems in Spain is unproblematic from a regulatory perspective.

Why do we need battery energy storage systems in Spain?

Due to the large capacity of installed hydroelectric and thermal storage systems and the resilience of the Spanish power grid, the need for Battery Energy Storage Systems (BESS) in Spain has been relatively low. The lack of a clear regulatory framework for BESS has also hindered its development in Spain so far.

What is Spain's battery storage market?

Spain's battery storage market is dominated by customer-sited systems. Utility-scale storage remains nascent. Currently, Spain's storage market is mainly composed of small-scale batteries co-located with solar PV. Spain's household electricity prices now stand at over EUR 0.30/kWh on average.

How much energy storage will Spain have in 2024 - 2043?

Aim to ensure the effective deployment of energy storage. Spanish storage capacity from the current 8.3 GW, to 20 GW in 2030 and 30 GW in 2050. The PNIEC scenario for the hourly pool price projection calculation for the 2024 - 2043 horizon has been carried out by the Advisor based on PNIEC objectives using the software xPryce¹⁷⁴;
