

Lithium solar battery cost vs benefit calculation in Chile

Why is Chile a good country for lithium production?

However, Chile's lithium production process is significantly advantaged by the exceptionally high lithium concentration in the Salar de Atacama--the highest in the world--and the region's high solar radiation, which enables the most cost-effective solar evaporation process globally.

Will lithium-ion batteries become more expensive in 2030?

According to some projections, by 2030, the cost of lithium-ion batteries could decrease by an additional 30-40%, driven by technological advancements and increased production. This trend is expected to open up new markets and applications for battery storage, further driving economic viability.

Is lithium research in Chile based on basic science?

However, lithium research in Chile is not only focused on technological developments, but examples of basic science are also being conducted, as seen in ref. 58 and 59.

Will new solar assets in Chile have storage components?

New utility-scale renewable and PMGE assets in Chile (most of which are distributed solar plants smaller than 9 MW) will likely all have storage components moving forward.

How much battery storage does Chile have?

Chile has an operational installed capacity of approximately 1GW in batteries, and another 3GW is under construction. Battery storage has been largely financed by bank lending in recent years, but we believe larger projects could increase the scope for bond financing.

How much lithium is in the Salar de Atacama?

The lithium reserves in the Salar de Atacama, owned by Corfo, are globally significant. Of the estimated 28.3 million tons of lithium reserves, 7.5 million are located in this salt flat.
