How much will Fingrid charge in 2025?

In 2025, the electricity storage capacity charge will be EUR87.5/MW per month, i.e. half the capacity fee for a power plant. In addition, Fingrid is planning a reform of the connection fee, which aims to increase the contribution of new entrants to the network reinforcement needs they create.

When will Fingrid introduce a capacity fee?

In order to harmonise its pricing practices, Fingrid has decided to introduce a new component to the grid service fees, a capacity fee for grid energy storages, on August 1st, 2025.

Which power storage facilities should be connected to the Fingrid network?

In the future, electricity storage facilities with a nominal capacity of more than 30 MW, which are to be connected directly to the Fingrid network, must be connected to the strongest nodes of the main grid, 400+110 kV or 400 kV substations.

Will Fingrid increase electricity consumption?

In addition to the scenario used for grid planning, the report outlines an alternative scenario for the increase in electricity consumption. This estimates growth based on investment decisions that Fingrid is aware of and which will raise electricity consumption, as well as connection agreements with customers.

What does Fingrid know about renewable electricity production?

Fingrid sees this first-hand: connection enquiries for renewable electricity production have been growing rapidly for several years, and Fingrid is already aware of approximately 400 gigawatts of wind and solar power production projects.
