

Microgrid storage cost vs benefit calculation in Israel

Should Israeli microgrids be based on centralized markets?

Since the current proposed reforms of Israel's electricity sector include fully centralized markets, the assumption of identical revenues for identical services is reasonable for the timeframe in which microgrids would move beyond an initial "pilot project" stage.

How much does a 10-MW microgrid investment benefit the Israeli economy?

This analysis indicates that, considering the reliability, T&D investment deferral, local economic, environmental, and social costs and benefits of each alternative, the net benefits to the Israeli economy from selecting the incremental 10-MW investment in a representative Israeli microgrid exceed \$13 million per year.

Are microgrids a sustainable alternative to Central-Station generation in Israel?

Sustainability multi-criteria evaluation for microgrid deployment is proposed. Environmental, economic and social costs and benefits are evaluated for microgrids. Microgrids are cost-effective alternative to central-station generation in Israel. Net benefits to the Israeli economy may exceed \$13 million per year.

What are the benefits of microgrids?

One potential benefit is the reduction/avoidance of transmission and distribution costs associated with the displacement or deferral of large, centralized generation and bulk transmission/distribution systems by microgrids with distributed resources closer to load centers.

Are microgrids a good investment?

In addition to the reduction in direct investment costs, microgrids also offer "option value" by allowing its component infrastructure to vary modularly with changes in loads, lead times, and/or renewables targets.

Are microgrids better than conventional central-station generation?

The results of that study indicate that, while microgrids may be superior to conventional central-station generation on a stand-alone cost-benefit analysis, both resource types require compensation through some combination of capacity, energy and ancillary service payments.
