

What is the Energy Storage pricing survey (ESPs)?

3. Purpose The annual Energy Storage Pricing Survey (ESPS) is designed to provide a reference system price to market participants, government officials, and financial industry participants for a variety of energy storage technologies at different power and energy ratings.

What is the ESS Buyer's Guide?

This ESS Buyer's Guide is a comprehensive list of what each brand is offering in the residential and C&I space heading into 2025. We sent a questionnaire to every manufacturer to ascertain their top product and what components are included. Is it a hybrid inverter with a roster of battery partners? Is the battery included?

How are energy storage systems priced?

They are priced according to five different power ratings to provide a relevant system comparison and a more precise estimate. The power rating of an energy storage system impacts system pricing, where larger systems are typically lower in cost (on a \$/kWh basis) than smaller ones due to volume purchasing, etc.

Are recycling and decommissioning included in the cost and performance assessment?

Recycling and decommissioning are included as additional costs for Li-ion, redox flow, and lead-acid technologies. The 2020 Cost and Performance Assessment analyzed energy storage systems from 2 to 10 hours. The 2022 Cost and Performance Assessment analyzes storage system at additional 24- and 100-hour durations.

What is a system price?

The system price provided is the total expected installed cost (capital plus EPC) of an energy storage system to a customer. Because the capital cost of these systems will vary depending on the power (kW) and energy (kWh) rating of the system, a range of system prices has been provided for the reader.

How much does a home cost compared to a residential system?

Put another way, prices within the 20th to 80th percentiles are up to 20% different from the median for residential systems, 40% different for nonresidential systems, and 30% different for utility-scale systems.
