How will the global inverter market perform in 2025?

Following a challenging 2024, the global inverter market is expected to return to revenue growth, with total revenue estimated to reach just under \$20 billion in 2025.

How much wind power will Finland have by 2035?

The range of wind power and electricity storage capacity estimated to be found in the Finnish electricity system by 2035 across the four different scenarios are listed in Table 2. The scenario with the highest amount of wind power had a combined onshore and offshore wind power capacity of 44 GW and a production of 141 TWh.

Will European inverter revenue rise in 2025?

Revenue in Europe is forecast to rise by 27% in 2025, driven by increased shipments to the residential segment, which suffered with consistently high inventory and reduced residential installations in 2024. However, European inverter revenue in 2025 will remain below 2023 levels as high levels of competition forces price reductions in the market.

Are string inverters worth it in 2025?

With higher power ratings, these string inverters will offer lower price per watt and save balance of system spend for solar systems due to lower cabling, installation, and operation and maintenance (O&M) costs due to fewer inverters used. The other technology to watch in 2025 is 2,000 volts (V).
