Is battery energy storage a solution to Europe's energy crisis?

Europe is at the forefront of decarbonisation efforts, with already achieved results and ambitious goals for the coming decades, particularly in the power sector. However, the greening of the European electricity system also requires increasing flexibility. Battery energy storage systems (BESS) represent a crucial component of the solution.

Does battery penetration affect PV market value?

The impact of battery penetration on PV market value is positive, with almost no effect on baseload prices. This mechanism illustrates well, how battery storage helps the utilisation of stored solar energy at a later point in time, when it generates higher welfare to consumers.

4.1. Battery utilization

What is the cost optimal range for a solar system?

Compared to the EU's 2030 target of 383-592 GW of solar capacity, our results show that in a range of 530-880 GW of PV combined with battery storage equivalent to 2.5-7.5% of the total intermittent capacity represents the cost optimal range in the system.

Do battery penetration levels depend on solar deployment level?

Furthermore, batteries can assist to reduce the curtailment of PV energy, which impact becomes increasingly prevalent as the penetration threshold is exceeded. The modelling results indicate that the optimal battery penetration level depends on the solar deployment level.

Do batteries reduce PV curtailment?

In the Very High PV scenario, total solar curtailment shrinks by almost 50% if a sufficient level of batteries is installed (20% battery scenario). This result indicates that batteries' benefits primarily arise from reducing PV curtailment levels, rather than through reducing the price cannibalisation impacts.

Does PV penetration increase costs compared to benefits?

When other characteristics of the system are maintained at their reference levels (e.g. net transfer capacities, wind capacities, demand), it is observed that further PV penetration induces greater costs than benefits, even when combined with significant BESS capacities.
