

Successful bid price of residential ESS project in Australia 2025

What is Australia's construction industry doing in 2025?

Australia, December 2024 - As Australia's construction industry approaches 2025, it is charting a path through a landscape defined by economic pressures, labour shortages and rising insolvencies.

Why is Australia's residential construction market struggling?

The Australia residential construction market faces several key restraints. Rising construction costs, driven by global supply chain disruptions, inflation, and labour shortages, are increasing the price of materials and wages, making housing less affordable.

Is Australia's construction industry ready for sustainable growth?

While increased geopolitical risks are pushing up construction costs and causing potential volatility of commodity prices, the softening of government demand is starting to ease cost growth. By reviewing controllable factors, Australia's construction industry can mitigate cost risks and position itself for sustainable growth.

Why is sustainability a major trend in Australian residential construction?

Sustainability is an increasingly prominent trend in the Australia residential construction market, driven by rising consumer demand for energy-efficient and environmentally conscious homes. Builders are embracing green materials, energy-saving technologies, and eco-friendly designs to minimise carbon footprints.

Why are new construction projects booming in Australia?

According to the Australia residential construction market report, the sector is driven by new builds, which offer various benefits such as customisation, energy efficiency, and lower maintenance costs.

Why is private residential construction gaining strength in Australia?

The increased strength of the private residential construction category reflects the significant focus at all levels of government to resolve the chronic housing affordability and availability issues in Australia and the easing of focus on infrastructure projects to free up more construction resources for the housing construction sector.

While the ESO was mandated by the MoP, the ministry recently issued an advisory notice on co-locating ESS with solar power projects, advising all renewable energy implementing agencies and state utilities to integrate two ...
