

# Utility scale ESS project financing options in Finland 2026

Will Finland support energy investments in 2022 - 2026?

On 16 December 2021, the Government issued a decree that will allow support to energy investments under Finland's Recovery and Resilience Plan in 2022-2026. The aim is to promote energy investment and energy infrastructure projects that reduce greenhouse gas emissions in Finland and support the country's 2035 carbon neutrality target.

Which energy storage technologies are being commissioned in Finland?

Currently, utility-scale energy storage technologies that have been commissioned in Finland are limited to BESS (lithium-ion batteries) and TES, mainly TTES and Cavern Thermal Energy Storages (CTES) connected to DH systems.

Is energy storage a viable solution for the Finnish energy system?

This development forebodes a significant transition in the Finnish energy system, requiring new flexibility mechanisms to cope with this large share of generation from variable renewable energy sources. Energy storage is one solution that can provide this flexibility and is therefore expected to grow.

Can ESSs solve intermittent power production in Finland?

The growth of wind deployments influences both the electricity system and the electricity markets. ESSs are one main solution to tackle intermittent power production, but in Finland, there are so many wind projects in the pipeline that ESSs alone cannot solve this issue.

How much funding is available for energy investments in Finland?

The amount of available funding will total about EUR 520 million. The Ministry of Economic Affairs and Employment and Business Finland will announce the first call for applications in the next few days. The Sustainable Growth Programme has specified the following amounts of funding to energy investments:

What factors influence the development of energy storage activities in Finland?

Several parameters are influencing the development of energy storage activities in Finland, including increased VRES production capacities, prospects to import/export electricity, investment aid, legislation, the electricity and reserve markets and geographic circumstances.

While the energy storage market continues to rapidly expand, fueled by record-low battery costs and robust policy support, challenges still loom on the horizon--tariffs, shifting tax incentives, and supply chain uncertainties ...

The aim is to promote energy investment and energy infrastructure projects that reduce greenhouse gas emissions in Finland and support the country's 2035 carbon neutrality ...

# Utility scale ESS project financing options in Finland 2026

That said, as the project finance market for BESS projects is still developing and equity remains the more typical source of financing, alternatives to the full-wrap, turnkey EPC agreement have been utilized on BESS projects, ...

As Finland continues to invest in ESS technologies and projects, the nation's energy landscape will become more sustainable and resilient. In conclusion, Finland's grid-scale/utility-scale ...

Frequency containment reserve (FCR) is the main ancillary service for batteries to play in, but the 550-600MW market is close to saturation with around 600MW of utility-scale battery energy storage installed at the time ...

Egypt's first utility-scale battery, Africa's biggest solar-plus-storage project underway Two major announcements within just five days signal the rapid acceleration of ...

The SunGiga All in One - The next generation of Utility Energy Storage With multiple PCS power options, dedicated thermal management, and fire suppression systems, SunGiga is ideal for ...

India's Standalone Energy Storage Systems (ESS) are becoming the backbone of India's utility-scale ESS auctions, accounting for 64% of the total tenders issued between ...

According to the U.S. Energy Information Administration (EIA), installed utility-scale battery storage capacity surpassed 15 GW in 2024 and is projected to more than double ...

More than \$600m for four US utility-scale batteries Recurrent Energy, Jupiter Power and Peregrine Energy Solutions have secured finance for a cumulative 550 MW of utility ...

Currently, utility-scale energy storage technologies that have been commissioned in Finland are limited to BESS (lithium-ion batteries) and TES, mainly TTES and ...

The World Bank has provided Botswana, one of the world's fastest-growing economies, with a loan to finance a 50 MW/200 MWh battery energy storage system, the ...

The large-scale battery energy storage (BESS) project is located in the Southern Ostrobothnia region of Finland. Construction is expected to start during Q2 2025, with operations of the BESS commencing in 2026.

The projections in this work focus on utility-scale lithium-ion battery systems for use in capacity expansion models. These projections form the inputs for battery storage in the Annual ...

Based on independent assurance provider DNV's global database of 4,210 ESS projects totalling 32GWh and

# Utility scale ESS project financing options in Finland 2026

publicly available information as of January 5, 2023 for a comparable size utility ...

The World Bank has provided Botswana, one of the world's fastest-growing economies, with a loan to finance a 50 MW/200 MWh battery energy storage system, the nation's biggest such project to date.
