How much does a Bess system cost in Vietnam?

In 2023, EVN PECC3 estimated that the cost for a 2 MWh BESS system was 360-420 USD/kWh, and that the investment would require electricity prices in Vietnam above 18 UScent/kWh to be profitable - this is twice the current levels. However, BESS costs are declining rapidly.

What is the storage capacity of a PV-battery system?

At the time of research, most of the papers studied PV-battery systems with storage capacities of 0.5-1 kWh times the installed PV capacity in kW, due to the high cost of such systems, meaning that batteries were used for short-term storage, normally less than one day.

Will Vietnam develop 300 MW of Bess by 2030?

Vietnam's current goal of developing only 300 MW of BESS by 2030 appears modest, but the figure does not include systems coupled to rooftop solar systems. To foster a resilient, efficient, and sustainable energy future, Vietnam should aim high.

How much power does Vietnam have in 2021?

The country's total installed capacity as of 2021 was 76.6 GW, an increase of 60% from 2018's 47.8 GW. While having traditionally relied heavily on coal for power generation, Vietnam has significant potential for hydropower, wind, and solar (Fig. 2).

What is the largest electricity storage project in Vietnam?

The largest electricity storage project in Vietnam is the Bac Ai Pumped Storage Hydropower Project. Located in Ninh Thuan province, the project has a capacity of 1,200 MW and is expected to play a crucial role in stabilizing the grid when it completes in a few years.

Why is Bess important in Vietnam's energy transition?

**Regulatory Landscape** The Vietnamese government has recognized the importance of BESS in the country's energy transition. The revised National Energy Policy includes new incentives for BESS installations, such as tax credits and subsidies, which are aimed at accelerating the adoption of energy storage solutions.
